Asphalt Maintenance and Rehabilitation

Sta-Bilt Construction Co., Inc. is a Specialist in Slurry Seal Applications

Slurry Seal, a combination of oil, rock, cement and water - truck-mixed in transit - is placed on asphalt streets, boulevards, highways and parking lots to substantially extend their beneficial usage.

Slurry Seal is spread in 12-foot wide passes; two passes normally required for most residential streets.

A Variety of Customers Need Slurry Seal Applications

Sta-Bilt Construction Co., Inc. performs Slurry Seal installations for governmental agencies such the Federal Aviation and General Aviation Airports. Working as a prime or sub contractor, Sta-Bilt applies Slurry Seal on commercial and industrial parking lots, and roadways. **Slurry Seal is especially good for airport runways and taxi maintenance.**

Only three-eighths of an inch thick, Slurry Seal extends asphalt life from 2 to 10 years depending on usage and conditions.
